## Ministry of the Environment Sweden

According to the Decision 280/2004/EC of the European Parliament and of the Council concerning a mechanism for monitoring Community greenhouse gas emissions and for implementing the Kyoto Protocol, each member state shall report their anthropogenic emissions of greenhouses gases annually to the Commission.

This submission consists of Sweden's National Inventory Report 2011 including CRF tables 1990-2009 and information from the national registry.

Please be informed that we are currently undertaking an update of the methodology for estimating certain carbon pools in the LULUCF sector and we will therefore submit updated figures for these as soon as possible. We also plan to deliver an update of our prognoses 2010 to 2030 within the next few weeks.
