Submission of the Natura 2000 database and GIS information regarding Swedish Natura 2000 sites

This is a submission of a supplemented N2000-database of the Natura 2000-sites in Sweden. The reason for the submission is adjustments of the Natura 2000-boundaries due to Lantmäteriet's, the Swedish mapping, cadastral and land registration authority, quality improvements of property boundaries.

Due to the fact that Sweden has changed reference system there is an on-going process where all Swedish municipalities are changing from the coordinate system RT90 to SWEREF 99. This process also leads to a quality improvement of municipal grid reference system. These quality improvements are also adopted to the Swedish Index Map and Property Map, by Lantmäteriet. The changes of the location of the property boundaries are maximum 3 feet, but usually there are small differences of about 5 to 10 inches. On March 1, 2010, 83 municipalities changed to SWEREF 99 (out of 290) and work is continuing with the rest of the municipalities.

Since many of the Natura 2000-boundaries are related to property boundaries they have also been transformed with the same parameters as the property boundaries. These quality improvements of the Natura 2000-objects may change the object's area.

The data will be sent by EIONET. Annex 1 lists all the sites where the area has been adjusted. The information submitted replaces all previous delivered Natura 2000 data (delivered in accordance with the Standard Data Form).

Please note that the enclosed data includes sensitive data on threatened species which should not be spread.

On behalf of the Swedish Environmental Protection Agency

Bo Lundin

Anne-Li Stenman
